Notes: Apparent *'Rocky 745' treated areas by spot spray application are not to be grazed or cut for stock food for at least 14 days after application.*

This is applied to council controlled areas as it is effective herbicide for grass weed control and will not kill other grass species such as Cocksfoot and Fescue thereby reducing bare ground in public environments.

The weed species controlled in this plan are part of the New England Weeds Authority's program to prevent the spread of Noxious Weeds and undesirable vegetation within the Armidale Dumaresq Council area and to maintain the roads and urban areas within a managed framework.

Definitions

Total Grass Control: Carried out around guideposts, guard rails and signage to prevent long grass interfering with furniture visibility. On RTA roads this work is carried out as per RTA standards.

Eucalypt and Wattle Suckers control: Carried out along road drainage lines as well as areas that tree establishment will interfere with line of sight distances. Small tree regrowth is targeted to maintain these areas in their current condition.
